

You have got to be kidding...!!! Doesn't The NAB, or shall I say monopolizers, have anything better to do than nit-pick issues with companies that provide a valued and requested service..?? Someone explain "Supply & Demand" to these people.....

Satellite offers "locally oriented" content for TV that now allows fair competition to cable. Why should it be any different for radio? I enjoy listening to XM Radio very much as well as stations from the conventional AM/FM radio. Why should we suffer because these money grubbers want all the loot. Isn't that what drives our capitalistic society. Competition...???

Let XM continue with the Traffic & Weather, it is much better & more timely than the local guys anyway.
